Apache MQ Instllation MacOS

- We use homebrew for the installation of Apache Active MQ

- The Command we use is `brew install apache-activemq`

- ActiveMQ will be installed in
  `/usr/local/Celalr/apache-activemq/version/` directory (`5.15.6`) in
  our case

  ```
  cd /usr/local/Celalr/apache-activemq/5.15.6/bin/
  ./activemq console
  ```

  - Then you can go to `http://127.0.0.1:8161/admin/` for the
    admin panel and use `admin` as the username and `admin` as the
    password.
  - Use this link for the github link to directly access the
    repository.
