

Apache Kafka

- Downloads
- Download [one of the mirrors](#) for the binary file * After `cd` into the root of the downloaded folder, run

```
sh bin/zookeeper-server-start.sh config/zookeeper.properties *
```

The `zookeeper` server has begun, open another terminal and run

```
sh bin/kafka-server-start.sh config/server.properties to run the
```

```
kafka server *
```
