

Installing Tools

Testing

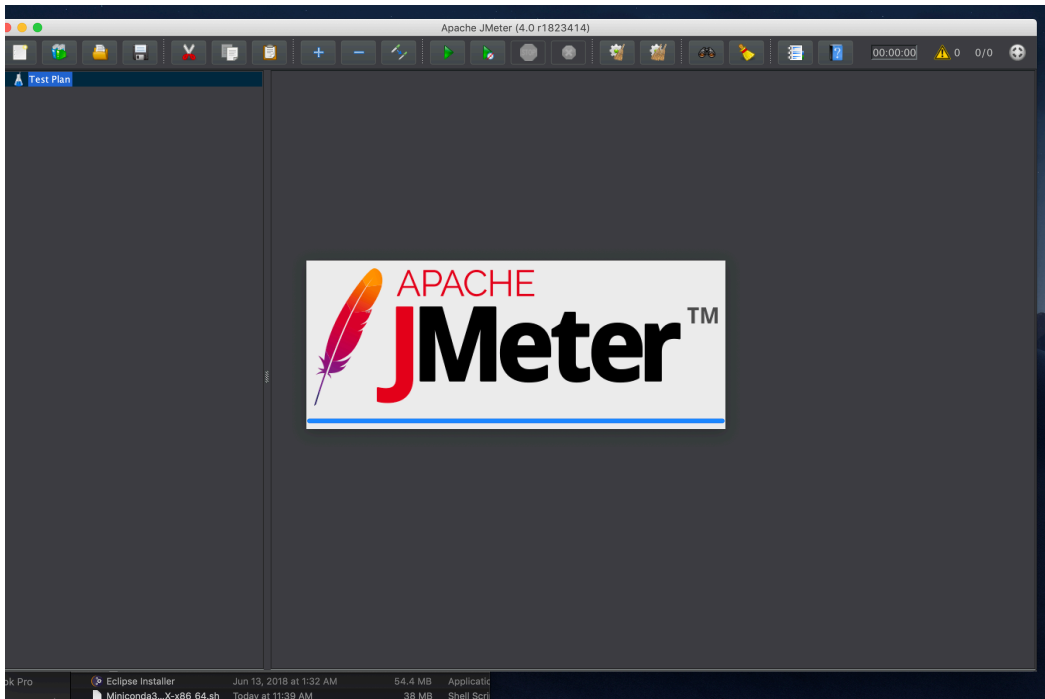

1. J-meter

2. On macOS, once Homebrew is installed we can simply use

`brew install jmeter` to install jmeter on the device.

- To update/upgrade we use `brew upgrade jmeter`.
- To test jmeter installation simply type in `jmeter -?` in the console to get a list of functions you can perform

3. To **launch** jmeter simply use `jmeter` to launch the *Jmeter GUI console*

Jmeter

Bug Finding

1. Error Prone

- Installed using the plugins tab in the preferences

2. Find Bugs

- Installed using the eclipse marketplace by `installing a new software` tab in the help section.
- Added the `http://findbugs.cs.umd.edu/eclipse` in the website section and installed.
